

Claims

1. A medicament based on antibodies and characterized by the presence of an activated form of ultra-low doses of monoclonal, polyclonal, or natural antibodies to the endothelial nitric oxide synthase (NO synthase), the activated form being prepared by multiple consecutive dilutions and exposure to external factors preferably according to the homeopathic technology.
2. A medicament according to Claim 1 characterized by the use of the entire molecule or polypeptide fragments of the NO synthase enzyme in preparing the antibodies.
3. A method of treating erectile dysfunctions and vegetative disturbances of male climax by regulating the level of cyclic guanosine monophosphate (cGMP) in the cavernous bodies on sexual stimulation characterized by the use of activated forms of ultra-low doses of antibodies to the entire molecule of endothelial NO synthase or to its polypeptide fragments, the activated forms being prepared by multiple consecutive dilutions and exposure to external factors.
4. A method of treating according to Claim 3 characterized by using mixtures of various, mostly centimal, homeopathic dilutions of antibodies to the entire molecule of the endothelial NO synthase or to its polypeptide fragments.
